IN THE CLAIMS:

PLEASE DELETE CLAIMS 1-10 WITHOUT PREJUDICE AND ADD THE FOLLOWING NEW CLAIMS:

Claim 11. A multilateral reference point sleeve, comprising:

a tubular member configured to be received in a casing of a wellbore, said tubular member having an uphole end and a downhole end, said uphole end defining an orientation profile.

Claim 12. A multilateral reference point sleeve as claimed in claim 11 wherein said orientation profile has an orientation opening therein.

Claim 13. A multilateral reference point sleeve as claimed in claim 11 wherein said opening is a slot.

Claim 14. The multilateral reference point sleeve of claim 11 wherein a surface of said orientation profile is positioned proximate the wellbore casing.

Claim 15. The multilateral reference point sleeve of claim 11 wherein said orientation slot extends along a wall of said tubular member from said orientation profile and is configured to receive a pin on a separate tool and to orient said separate tool.

Claim 16. The multilateral reference point sleeve of claim 11 wherein said tubular member is anchorable within said wellbore.

Claim 17. The multilateral reference point sleeve of claim 16 wherein said downhole end of said tubular member is radially expandable to engage an inner surface of said casing.

Claim 18. The multilateral reference point sleeve of claim 17 wherein said downhole end of said tubular member has a lesser thickness than said uphole end of said tubular member.

Claim 19. A method for orienting a tool in a wellbore, comprising:

running a multilateral reference point sleeve as defined in claim 1 into a tubing string in said wellbore;

anchoring said multilateral reference point sleeve to an inner surface of said casing;

running said tool into said casing;

causing a pin on said tool to engage an orientation profile on said multilateral reference point sleeve.

Claim 20. A method for orienting a tool in wellbore as claimed in claim 19 further including causing said pin on said tool to engage an orientation opening on said orientation profile.

Claim 21. A method for orienting a tool in wellbore as claimed in claim 19 wherein said opening is a slot.

Claim 22. The method of claim 19 wherein said causing of said pin on said tool to engage said orientation profile rotates said tool into a desired orientation.

Claim 23. The method of claim 22 wherein said causing of said pin on said tool to engage said orientation slot causes said tool to be retained in position.

Claim 24. The method of claim 22 wherein said orienting includes snapping in a collet on said tool to a collet groove in said sleeve.
